WI-FI AND CELLULAR PLANNING

Wireless Project Scope Checklist

Use this sheet to describe the coverage problem, separate system responsibilities and prepare for the right survey and installation scope.

Project / location: _____ Review date: _____

01 Users & devices

- ☐ List the affected devices, applications, locations and busy periods.
- ☐ Describe the problem: weak signal, dropped calls or slow application use.

02 Identify the system

- ☐ Separate local Wi-Fi needs from carrier cellular service and DAS.
- ☐ Treat public-safety radio needs as a separate scope for the project team.

03 Building conditions

- ☐ Provide current floor plans, materials and expected layout changes.
- ☐ Identify access limits, ceiling conditions and installation work windows.

04 Survey & ownership

- ☐ Name the Wi-Fi, cellular and service-provider decision-makers.
- ☐ Agree on the appropriate survey scope, deliverables and approval owner.

05 Power & pathways

- ☐ Confirm mounting, power, cabling and pathway responsibilities.
- ☐ Define equipment supply, network setup and activation interfaces.

06 Acceptance & follow-up

- ☐ Agree on the devices, locations and tasks used to check the result.
- ☐ Record acceptance evidence, remaining issues and support contacts.

Full guide and references: Read the project planning guide online

Planning aid: use the agreed project scope and applicable requirements for final decisions.

Start with the coverage problem and clear ownership.
